- HW due Thurs
- Review session Thurs
- Exam on Tuesday

**PDA**

$\{0^i 1^j 2^k 3^l : i=j, k=l\}$

{ " " |  $i=k, j=l$  }  
 { " " |  $i=l, j=k$  }

① Push 0's on stack  
 ② Pop for each 1  
 ③ If get perfectly to empty stack, repeat w/ 2's 3's.

- ① Add 0's to queue  
 ② Dequeue for each 1  
 ③ If perfect amount continue (\$ at end of queue)

$\{0^i 1^j 2^i 3^j : i, j \geq 0\}$

Impossible with stack  
 ↳ Recall in opposite order you remembered.

$\{0^i 1^j 2^j 3^i : i, j \geq 0\}$

for PDA (similar to this GA.)

( $\{ \}$ ) with G.A

① Setup queue  $\rightarrow \$ 000 \dots \# 111 \dots \Delta$   
 front  $\rightarrow$  back

② Cycle for reorder  $\rightarrow \# 111 \dots \Delta \$ 000 \dots 0$

③ Straightforward Comparison.

$00 \dots \# \dots 11$

$\{ w \$ w^R \mid w \in \{0,1\}^* \}$

→ straight forward w/ PDA

→ Many extra cycles w/ G.A.

↑  
Examl  
ends  
here.

Identifying Reg. Exp.

$\Sigma = \{ (, ), \phi, 0, 1, \cup, * \}$

$(\phi \cup 1) \in L$   
 $) ( \notin L$

$L$  is strings generated by

•  $\phi, 0, 1 \in L$

•  $(R_1 R_2), (R_1 \cup R_2), (R_1^*) \in L$  wherever  $R_1, R_2 \in L$ .

Goal: Recognize  $L$  w/ PDA.

High Level  
Idea

- Apply rules a bunch of times.
- Have something in  $L$  on the stack

Actually intervene this.  $\rightarrow$  Compare this to input, accept if match.

- $\epsilon, R \rightarrow \emptyset$
- $\epsilon, R \rightarrow C$
- $\epsilon, R \rightarrow |$
- $\epsilon, R \rightarrow (R R)$
- $\epsilon, R \rightarrow (R \cup R)$
- $\epsilon, R \rightarrow (R *)$

Wlog, allow "multiple"

$$\Sigma = \{ (, ), \phi, \cup, \cap, \cup, * \}$$

formally, a PDA is a 6-tuple  
 $M = (Q, \Sigma, \Gamma, q_0, \delta, F)$

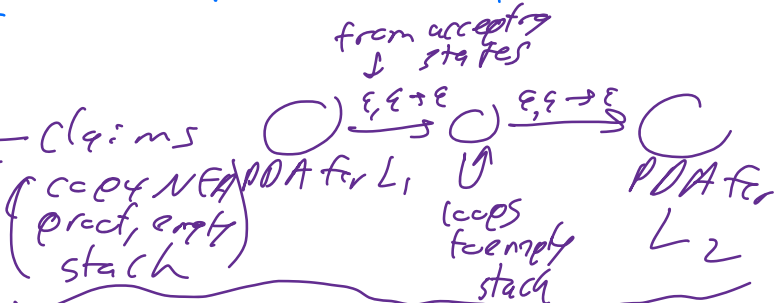

stack alphabet  
 finite set of symbols

$$\delta: Q \times (\Sigma \cup \{\epsilon\}) \times (\Gamma \cup \{\epsilon\}) \rightarrow P(Q \times (\Gamma \cup \{\epsilon\}))$$

Is the class of languages recognized by PDAs  
 closed under

- ✓ Union
- ✓ Concat
- ✓ \*
- ✗ complement
- ✗ intersection
- ✓ INSERT

$$A \cap B = C$$

High level idea works, but  
needs refinement.  
(Expanded in concatenation)  
(addendum.)
