## CS 4510 Automata and Complexity

## Exam 1A: Regular Languages

Date: 3:30-4:45pm Tuesday, September 19 Prof. Jaeger

Name:	CTID.
Name:	G1ID:

- When handing in this test, please go to a TA with your BuzzCard to verify the name on the test.
- Do not open this exam until you are directed to do so. Read all the instructions first.
- Write your name and GTID# (numbers, not letters) on the top of every page. Your GTID# can be found on your BuzzCard.
- By submitting this exam, you agree that your actions during this exam conform with the Georgia Tech Honor Code.
- This exam is out of N = 100 points (with one extra credit point for writing your name). We reserve the right to decrease N if we misevaluated the difficulty of a question.
- Write your solutions in the space provided. If you run out of space, continue your answer on the back of the last page, and make a notation on the front of the sheet.
- There is a page of scratch paper at the end of the exam. We can provide additional scratch paper if you need it. The only outside material you may use on the exam is one (1) double-sided, hand-written, 8.5"x11" page of notes.
- Calculators are NOT permitted.
- You may use any of the theorems/facts/lemmas from the lecture notes, homeworks, or textbook without re-proving them unless explicitly stated otherwise.
- If you have a question, you may ask a TA. You should not communicate with anyone other than teaching staff during the exam.
- Do not spend too much time on any one problem! If you get stuck, move on and come back to that one later.
- Each problem is labeled with the number of points it is expected to be worth. These values may be shifted if any problems end up being more difficult than expected.
- Good luck!

0. Following Instructions [1 point extra credit]

Please write your name and GTID# (numbers, not letters) at the top of EACH page of this exam. Your GTID# can be found on your BuzzCard.

- 1. Multiple Choices [32 points] Fill ALL answers which apply.
  - (a) [8 points] Which of the following statements are true. Choose ALL that apply.
    - $\bigcirc$  If D is a DFA and  $D.q_0 \in D.F$ , then  $\varepsilon \in L(D)$ .
    - $\bigcirc$  If R is a regular expression, then there exists an NFA N such that L(R) = L(N).
    - $\bigcirc$  If  $L \in REG$ , then L is finite.
    - $\bigcirc$  If L is finite, then  $L \in REG$ .
    - $\bigcirc$  If  $L \notin REG$  and  $L' \notin REG$ , then  $L \cup L' \notin REG$
  - (b) [8 points] Which of the following regular expressions DEFINITELY describe a non-empty language. (R is an arbitrary regular expression.) Choose ALL that apply.
    - $\bigcirc$  111  $\cup$  1\*
    - $\bigcirc R^*$
    - $\bigcap R \circ \emptyset$
    - $\bigcirc R \cup \emptyset$
    - $\bigcap R \circ \varepsilon$
    - $\bigcap R \cup \varepsilon$
  - (c) [8 points] Which of the following languages are regular? Choose ALL that apply.
    - $\bigcirc L_1 = \{x \mid x \text{ contains more than two 1's}\}\$
    - $\bigcirc L_2 = \{a^n b^n \mid n \in \mathbb{Z}_{\geq 0}\} \cup \{x \mid \text{the length of } x \text{ is even}\}$
    - $\bigcirc$   $L_3 = \{x \mid x \text{ is a palindrome OR } x \text{ is not a palindrome}\}$
    - $\bigcirc L_4 = \{0^n 10^n \mid n \in \mathbb{Z}_{\geq 0}\}$
    - $\bigcirc L_5 = \{0^n 1^n \mid n \in \mathbb{Z}_{\geq 0}, n < 15\}$
    - $\bigcirc L_6 = \overline{L_4}$
    - $\bigcirc L_7 = \{0^n 1^m \mid n, m \in \mathbb{Z}_{\geq 0}\}$
  - (d) [8 points] You are using the pumping lemma to show that  $\{0^n1^m \mid n \leq m, n, m \in \mathbb{Z}_{\geq 0}\}$  is not regular. You have assumed p is the pumping length. Which of the following choices for s allow you to successfully complete the proof, where s is the counterexample string which you show cannot be pumped? Choose ALL that apply.
    - $\bigcirc$  000001111111
    - $\bigcirc 0^p 1^p$
    - $\bigcirc 0^p 1^{2p}$
    - $\bigcirc 0^{2p}1^p$
    - $\bigcirc 0^{p-1}1^p$

- 2. [15 points] Consider the language  $L = \{x \mid x \text{ ends with ab or bc}\}$  over the alphabet  $\Sigma = \{a, b, c\}$ . You will express this language in each of the following parts. Note that your NFA should be different from your DFA and must take advantage of nondeterminism.
  - (a) [5 points] Draw the state diagram (circles and arrows) of a DFA accepting L.

(b) [5 points] Draw the state diagram of a "simpler" NFA accepting L. If your NFA is the same as your DFA and does not take advantage of nondeterminism, it will result in no points being awarded.

(c) [5 points] Construct the regular expression for L. Use only the symbols  $\emptyset$ ,  $\varepsilon$ , a, b, c,  $\circ$ ,  $\cup$ , \*, ), and (. You may leave  $\circ$ 's implicit.

- 3. [18 points] If A and B are sets then we define the set difference operation by  $A \setminus B = \{x \mid x \in A \text{ and } x \notin B\}.$ 
  - (a) [5 points] Prove that the class of regular languages (REG) is closed under set difference using closure properties we've already proven.

(b) [13 points] Prove that the class of regular languages (REG) is closed under set difference WITHOUT using closure properties we've already proven.

Name:	GTID:	

4. [20 points] Recall that if  $w = w_0 w_1 \dots w_n$ , then we let  $w^{\mathcal{R}}$  denote w written in reverse (i.e.,  $w^{\mathcal{R}} = w_n \dots w_1 w_0$ ). Let  $\Sigma = \{a, b, \dots, z\}$  be the set of lowercase English letters. Now consider the following languages:

$$L_{\text{palindrome}} = \{ w \in \Sigma^* \mid w = w^{\mathcal{R}} \}$$
$$L_{\text{flipped}} = \{ vw \in \Sigma^* \mid v = w^{\mathcal{R}} \}.$$

Prove that  $L_{\text{flipped}}$  is not regular using the pumping lemma. Then prove that  $L_{\text{palindrome}}$  is not regular using the fact that REG is closed under set difference (combined with some language we already know is regular).

Name:	GTID:
rumic:	GTID.

5. [15 points] Consider the language  $L = \{x \mid x \text{ does not contain } 111 \text{ as a substring}\}$ . Prove that L is regular using the technique of your choice.
